SUMMARY

Automation and Platform Engineer with four years at DXC Technology, working remotely on enterprise Windows Server, SQL Server and storage estates. I build automation that runs unattended and survives failure: a ServiceNow ticket-operations suite with heartbeat-based failover, tooling written dependency-free for servers with no internet access, and monitoring that flags problems months ahead. Proposed an automation team and trained it from zero to 12 engineers. MTech in Data Engineering from IIT Jodhpur, completed alongside full-time work.

SKILLS

Languages:	Python, PowerShell (5.1 and 7), T-SQL, vanilla JavaScript
Automation and ITSM:	ServiceNow (incident and RITM), Selenium WebDriver, Windows Task Scheduler, BladeLogic, Outlook/win32com
Platforms:	Windows Server 2016/2019, SQL Server, Group Policy and ADMX, NTFS internals, Azure, Linux
Storage:	NetApp, Dell EMC VMAX/PowerMax and Centera, HPE 3PAR, Pure Storage, Brocade and Cisco MDS SAN
Data and ML:	pandas, scikit-learn, time-series forecasting, anomaly detection, Matplotlib, RAG (Ollama, FAISS)
Practice:	Git, fault-tolerant design (leader election, failover), runbooks, technical training

EXPERIENCE

Analyst I, Infrastructure Services (automation engineering)

Oct 2025 – Present

DXC Technology | Remote, India

- Built and own a Python and Selenium suite for ServiceNow that extracts incident and RITM queues, completes repetitive web forms and emails scheduled reports, replacing hours of manual queue handling every day.
- Designed a fault-tolerant scheduler across Windows VMs using heartbeat-based leader election, so reporting continues through a node failure.
- Rebuilt a filesystem inventory tool to read the NTFS Master File Table directly. A full-volume scan fell from about 46 seconds to about 4 across 800,000+ records.
- Wrote a self-contained PowerShell engine that applies Group Policy changes from a CSV request across Windows Server 2016/2019 fleets, and extended a hardening checker from 58 to 129 automated controls.
- Proposed an automation team the organisation had been unable to staff, then built it to 12 engineers by designing and teaching zero to developer Python and PowerShell curricula.

Python, Selenium, PowerShell, Task Scheduler, Outlook/win32com, Git

Analyst II, Infrastructure Services

Oct 2023 – Oct 2025

DXC Technology | Remote, India

- Automated Centera health monitoring and log management, cutting manual effort by 80%, and brought storage quota requests from hours to minutes.
- Normalised vendor storage reports across VMAX, PowerMax, 3PAR, Pure, Brocade, MDS and Centera into one reporting set.
- Built forecasting and anomaly-detection pipelines for CPU, memory, disk I/O and network metrics, moving the team from reactive alerts to early intervention.
- Ran a private, locally hosted RAG assistant (Ollama, FAISS) over runbooks, CSVs and PDFs, keeping operational data in-house.

Python, PowerShell, pandas, scikit-learn, Ollama, FAISS

Associate Professional Software Engineer

Jun 2022 – Oct 2023

DXC Technology | Remote, India

- Automated NetApp quota reporting, log movement and migration tracking with Python and PowerShell, including alerts and log consolidation during migrations.
- Built CSV-to-Excel pipelines for Daily Audit Process reports, removing a manual reporting bottleneck.

Python, PowerShell, NetApp

PROJECTS

Automation Opportunity Dashboard

DXC Technology

A single-file interactive dashboard for the team's automation pipeline, with multi-select filters, cross-filtered charts, Excel export and per-chart PNG export. It refreshes by reloading the source workbook, and it runs where CDN libraries are blocked because every chart is hand-written SVG.

Vanilla JavaScript, SVG, HTML/CSS

SAN switch certificate monitor

DXC Technology

Checks certificate expiry across SAN switch estates in several regions by driving SSH sessions through jump hosts, then emails a colour-coded report. Green means more than three months left, amber two to three, red under two.

Python, SSH, Excel, Outlook

OpenFreezeCenter

Open source | since 2021

A fan-control GUI for MSI laptops running Linux, where the vendor's own tool does not exist. I wrote it for my own machine, published it, and have maintained it since. github.com/YoCodingMonster/OpenFreezeCenter

Python, Linux

EDUCATION

MTech, Data Engineering

Jul 2024 – Jul 2026

Indian Institute of Technology Jodhpur | CGPA 7.30 / 10

Completed alongside full-time work. Coursework covered Distributed Systems, Big Data Management, MLOps, Stream Analytics, Virtualization and Cloud Computing, Machine Learning and Time Series Analysis.

BTech, Biotechnology

2018 – 2022

Amity University, Greater Noida | CGPA 7.51 / 10

Project work on CRISPR gene editing, done in parallel with the degree. Internships in data science, machine learning and bioinformatics at Verzeo, Pine Biotech and Rapture Biotech (2020 – 2021).

BSc, Botany

2015 – 2018

University of Lucknow

CERTIFICATIONS

Claude Certified Architect, Professional | Anthropic, Aug 2026

Claude Certified Architect, Foundations | Anthropic, Aug 2026

Information Storage and Management Foundations v2 | Dell Technologies, Feb 2026

PCEP, Certified Entry-Level Python Programmer | Python Institute, Nov 2025

Azure Fundamentals | Microsoft, Oct 2022

AWARDS

DXC Champion Collaborators Award | FY25 H2

DXC Champions Award | FY25 H1

DXC Champs Award | FY24 Q1
